REVER ANNOUNCES PARTNERSHIP FOR GDPR

A complete software solution for GDPR, unique on the market

Brussels, Belgium: The Belgian Information Governance specialist Rever joins forces with ActeCil Groupe, a French compliance expert in Personal Data Management. This new alliance strengthens the position of both companies on the European market with regard to data protection.

The new European regulation (**General Data Protection Regulation**) will enter into force by 28 May 2018 and is a real challenge for organizations in Europe as well as for all those active on the European territory. The data collected for many years are buried under very deep layers which are complex to uncover, update and understand for most companies.

To meet the challenge of compliance, Rever and ActeCil developed a complete software suite which is unique on the market and allows all stakeholders (CDO, DPO, legal, business and technical people) to bring their contribution to the collaborative work necessary to get the company compliant with GDPR.

About Rever: since 2004, Rever offers a range of automated solutions for the detailed understanding of existing IT applications in Europe and the U.S. Proud of the precision of our products, we also propose information governance services from our offices in Brussels and Namur.

About ActeCil: since 2007, ActeCil Groupe accompanies private and public entities in their compliance process in relation to regulations governing the use of personal data (CIL, GDPR...). The company holds 6 CNIL labels and is based in eastern France with several offices in France and overseas.
